

Our Guarantee

If you are not satisfied with the quality of the seminar that you attend, Metso will reimburse your tuition.

Our programs are NOT sales presentations; they ARE presentations designed to show your personnel how to maximize production while minimizing operating costs. If anyone who attends a seminar feels unsatisfied with the content, we'll return your tuition payment — no questions asked!

How to Register

Registration Close & Cancellations

Registrations are taken on a first come, first served basis. Seating is limited.

If you are unable to attend the seminar you registered for, you may register a substitute at any time prior to the seminar. If you do not have a substitute and must cancel your registration, call the Training Coordinator no later than 7 business days prior to the seminar start to avoid a cancellation charge of \$150.00. Cancellations made after the seminar start are subject to the full tuition charge. Metso has the right to refuse attendance to any person or company.

Regional Training Fee Schedule

- 1 Day**

Who will benefit from attending a training seminar?

Everyone at the plant from ground crew to superintendents; anyone involved in quarry or mine operations. Metso training seminars are highly regarded as technical seminars, we do not waste your time making a sales pitch.

Are all the 2009 seminars listed the same?

No, the 2009 schedule listed in this pamphlet lists two different types of seminars, **regional** and **factory**.

Regional seminars are classroom style seminars given by a single or team of instructors. They are PowerPoint based but very thoroughly cover the seminar agenda.

Factory based training includes the regional format along with a crusher disassembly.

What can you expect to learn at a Metso Maintenance & Operations seminar?

The agenda that we follow has been a work in progress for over 30 years. Our training seminars all follow the same format:

Parts Identification

This establishes the vocabulary you will need to maintain your crusher

Lubrication System

The lifeblood of your crusher, one of the top three most important systems to master

Operating Guidelines

Is your crusher producing at the designed limits? What are your crushers limits?

Maintenance

No shortcuts here, the proper way to keep you crushing at peak performance

Liners

You need to know more about your liners then just how to change them if you want to get your money's worth out of them

Hydraulics

What's really going on inside your hydraulic power unit

Safety

What you can do to operate your crusher with minimal risk to yourself and equipment
